

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (currently amended) Film made of holed plastic material three-dimensionally shaped, having an upper surface presenting a multiplicity of openings extending in the form of through holes in the direction of a lower surface of the same film; each through hole being completely surrounded by, and mutually adjacent through holes being separated by, segments of said film that are all of the same height and all have a profile with symmetrical sides extending to, and converging towards, the upper surface, characterized in that said profile of the film segments has a semi-ellipse cross-section and, said film is dimensioned such that, at said lower surface, said through holes have a total passage area equal to 20 to 33% of the area covered by said film.

2. (previously presented) Film made of holed plastic material according to claim 1, characterized in that said semi-ellipse cross section profile of the film segments has a lesser axis equal to the lesser diameter and lying on the lower surface of

the film itself and with the vertex, relating to the greater axis, on the upper surface of the film itself.

3. (withdrawn) Matrix for the realisation of the film according to claim 1, characterised in that said matrix is realised in the form of a thick mesh of mutually connected elements, with conic cross section, obtained with the deposition of metal in successive phases.

4. (withdrawn) Matrix for the realisation of the film according to claim 3, characterised in that each matrix element is realised with three layers, corresponding to an equal number of phases.

5. (withdrawn) Matrix for the realisation of the film according to claim 4, characterised in that said three layers of matrix element are made of different metals.

6. (withdrawn) Matrix for the realisation of the film according to claim 4, characterised in that said three layers of matrix element are made of the same metal.
